PERIMIND CONNECT

Give AI the business context it needs to deliver real value

Connect AI to the information it needs, without losing control of how that information is accessed and used.

Your business runs on connected information. Your AI should too.

AI is only as useful as the information it can access. But critical business data often lives across disconnected applications, databases and legacy systems.

Perimind Connect helps organizations give AI access to trusted enterprise data while preserving permissions, traceability and control.

> "AI Action Governance addresses one of the most important gaps emerging as AI moves into production environments."
>
> **Richard Stiennon**, Cybersecurity analyst and CEO, IT-Harvest

TRUSTED BY LEADING FINANCIAL INSTITUTIONS, GOVERNMENT ORGANIZATIONS AND GLOBAL ENTERPRISES

AT A GLANCE

Enterprise data connectivity
Connect AI applications to relevant business information across supported systems and data sources.

Governed data access
Maintain appropriate permissions and controls as AI interacts with enterprise information.

Legacy system enablement
Make valuable information in existing and legacy systems available to modern AI use cases.

Trusted business context
Give AI access to relevant enterprise information to support more useful, context-aware interactions.

Traceability & accountability
Support visibility into how enterprise information is accessed and used across connected applications.

WHERE CONNECT DELIVERS VALUE

Your data is already valuable. Make it more useful.

Connect helps organizations address practical business challenges where fragmented information limits what AI can accomplish.

Customer & member experiences

Bring together relevant information across systems to support more personalized, context-aware AI interactions.

Employee productivity

Help AI assistants access appropriate business information so employees can find answers and complete tasks more efficiently.

Legacy system modernization

Extend the usefulness of existing systems by making their information available to modern AI applications.

Cross-system workflows

Support AI applications and agents that need information from multiple business systems to complete a process.

Governed AI applications

Provide enterprise data access with appropriate permissions, traceability and accountability.

Built on your existing systems

You don't need to replace the systems your business depends on to make their information useful for AI.

PART OF PERIMIND, THE PLATFORM FOR TRUSTED AI OPERATIONS

Observe · Govern · Connect · Automate

Ready to unlock more value from your data?

Let's explore how governed enterprise data access can support your AI goals.
