PERIMIND OBSERVE

Get visibility into your AI in weeks, not months

See your AI activity and biggest risks in days, and know where to focus next.

Do you know where your AI risks are hiding?

AI is spreading across your organization, from chat assistants and copilots to embedded AI and autonomous agents. PeriMind Observe gives you a clearer picture of AI activity, risk, cost and maturity, so you can prioritize what matters and make informed decisions about what comes next.

Start where you are

Observe for Discovery
Establish a point-in-time baseline of AI activity, exposure and maturity, with findings to help prioritize action.

Continuous observability
Track evolving AI usage, agents and risks, and use insights to decide when runtime enforcement through PeriMind Govern is needed.

TRUSTED BY LEADING FINANCIAL INSTITUTIONS, GOVERNMENT ORGANIZATIONS AND GLOBAL ENTERPRISES

AT A GLANCE

AI discovery
Discover sanctioned and unsanctioned AI activity across supported platforms and sources.

Maturity assessment
Understand AI maturity across teams and domains using Cinchy's five-level model.

Risk prioritization
Identify and prioritize risks involving sensitive data, access, agents, oversight and operational resilience.

Adoption & spend
Connect adoption and AI spend information to risk and business decisions.

Ongoing visibility
Establish a baseline, then maintain visibility as the AI environment changes.

EIGHT DOMAINS FOR PRACTICAL PRIORITIZATION

One view across a fragmented AI environment

Observe brings AI activity across ChatGPT, Claude, Microsoft Copilot, embedded SaaS AI and agent workflows into a more consistent view, based on supported integrations and available data sources.

AI estate & shadow AI
What AI is being used, and where?

Adoption & fluency
How is AI being adopted across teams?

Spend & model economics
Where are resources going?

Data & secrets exposure
Where might sensitive information be at risk?

Oversight & output integrity
How are outputs reviewed and trusted?

Access & agent behavior
What can AI access or do?

Continuity
What dependencies and operational risks exist?

Regulatory readiness
What evidence and controls may be needed?
